

HTL75 Wireless LED Lighting Fixture

The HTL75 is a small compact wireless controlled RGB LED fixture compatible with all ColorMaker series wireless transmitters. The HTL75 operates on 916 MHz and has a range of 150 feet. Line of sight is not required.

The HTL75 wide angle beam will saturate small spaces with brilliant colors ideal for under counter and cove lighting. Fixture can swivel 180 degrees on mounting bracket.

Auto Addressing

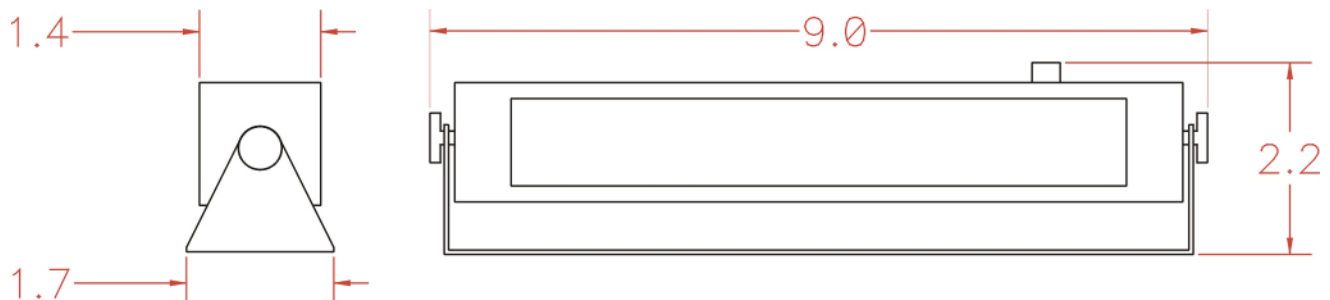

The HTL75 incorporates our auto addressing feature for easy setup. User selectable address is programmable to 1 of 32 channel using the transmitter. The address is stored in memory and can be changed as many times as needed.

ColorRoll

The HTL75 incorporates our ColorRoll technology developed by ColorMaker inc. The ColorRoll features enable the fixture to roll through a set of programmable colors without the use of the transmitter. The ColorRoll is a set of 10 colors which are programmed by the user. These colors are sent to the fixture by the handheld transmitter. Once the ColorRoll has started roll rates can be set by the transmitter from 3 seconds per color to 5 minutes per color. ColorRoll will continuously cycle through all the colors until blackout button is pressed on the transmitter.

The HTL75 operates on 12 volts and requires only 600Ma at full power and can be powered from wall adapter or one of our portable battery packs.
